Experience

Personal Projects *May 2022 - Current*

I have been working full time on launching my own projects for the last 11 months. Here are two that are still online.

- [Collectorius](#) - No code website builder for peoples collections. A React WYSIWYG editor for creating websites, AWS infra for automation of: deploying sites, registering domains, setting up SSL certs and hosting static sites behind cloudfront.
- [Leadect \(working name\)](#) - Combination of web scraping and AI to search social media content for sales leads and strong product sentiment. This is still in dev but an MVP is almost done. The final version will be two products: a search tool for surfacing/monitoring social media leads, and an embeddable widget for a live feed of content with positive sentiment.

[Flexport](#) *Jan 2021 - Apr 2022*

Worked on the frontend infrastructure team. Maintained the design system and our graphql service. Supported the migration from a Rails monolith to a service-oriented architecture.

[Brightidea](#) *Jun 2018 - Oct 2020*

Worked with React, PHP, JQuery and Backbone on a 25 year old codebase full of legacy code and quirks. Built chat/commenting functionality, improved how we build and deploy JS bundles, built out the React Native mobile app.

[Katalyst](#) *Jan 2017 - Nov 2017*

Worked on the initial AngularJS application. Built out the scheduling system, JWT auth system and Braintree Billing system.

[Acutulus](#) Jan 2015 - Nov 2017

Worked for many different clients building full stack and mobile applications, primarily using AngularJS, Node and Ruby on Rails. Built MVP for several clients who went on to succeed ([myhippo](#))

Technical Skills

Specialties: React, React Native, NodeJs, NextJs

Proficient: PHP, Rails, Django, Python, SQL, AWS, Azure, All the JS tools (npm, yarn, webpack, typescript, jest), terminal skills, and many more of the billion things a modern developer needs to know ;).

Testimonials

Eric is a hard working engineer. He adapted to the company's style and workflow quickly, while mastering new frameworks and technologies. Eric is enthusiastic about projects, he remains focused and is able to prioritize. He continues to produce optimized, reusable code while learning whatever is needed to produce the best product. As a small company we all have to fill various roles and be able to work independently, Eric excels at this. Whether it is coding new applications from the ground up, debugging and optimizing existing code, or coordinating with customer engineering teams, he succeeds at the task at hand.

Ed Parsons

CEO Acutulus Enterprises
