Experience

Software Engineer

[Physna](#)

Oct 2023 - Oct 2025

Worked on two different products:

Physna B2B, 3d search application - 3D search across a huge set of 3D data.

- Worked on small team (5 people), rebuilding entire app from scratch in an IL5 compliant manner (FEDRamp high compliant)
- Helped rewrite code to be cloud agnostic (could run on GCP, AWS or rework to run elsewhere with minimal effort).
- Built our 0 setup embeddable 3D viewer that allows clients to use our 3D model viewer in their own applications.
- Built CI/CD system (on CircleCI), setup our testing, deploying and monitoring devops tooling.

Node, React, Postgres, elasticsearch, pulumi, aws

[thangs.com](#) - 5m weekly user platform for downloading and buying models for 3D printing.

- Worked on site while it grew from 1 million - 5m weekly users
- Did frontend perf optimizations around image loading, rapidly scrolling 1000s of images, and minimizing rerenders. Try scrolling down through an infinite scroll page like [trending models](#), to see the effects.
- Implemented features: Commenting, Saved items, Marketplace
- Got deep into React and NextJS performance and maintainability.

Nextjs, React, NodeJS, Google cloud

Software Engineer Solo Dev

Jun 2022 - Jul 2023

Consultant at Switchboard Financial planning

<https://www.linkedin.com/company/switchboardaf/>, Application for financial advisors.

React, AWS (api-gateway, lambdas), Serverless Framework, Postgres

Personal Project:

<https://collectorius.com>

No code website builder specifically for collectors.

Made a React WYSIWYG editor for creating websites, AWS infra for automation of: deploying sites, registering domains, setting up SSL certs and hosting static sites behind cloudfront.

Frontend Infrastructure Engineer

[Flexport](#)

Jan 2021 - Apr 2022

- Worked on the frontend infrastructure team.
- Maintained and extended the React component library.
- Updated and extended our [Design System](#), enforced design principles using: React props, typing, eslint rules, documentation and direct messages.
- Mentored and advised other teams on frontend best practices.
- Helped drive the cross-team migration from a Rails monolith to a GraphQL service. (updating docs, advising teams, giving presentations).

React, Full Stack Developer

[Brightidea](#)

Jun 2018 - Oct 2020

- Worked with React, PHP, JQuery and Backbone on a 25 year old codebase full of legacy code and quirks.
- Built the new commenting system, rewrote in React and added Richtext capabilities, user tagging, hashtagging and link previews.
- Improved build and deploy system for JS bundles.

- Rewrote portions of the mobile app using React Native, added a speech to text feature.

Full Stack Developer

[Acutulus](#)

Jan 2015 - Nov 2017

- Worked for many different clients building full stack and mobile application MVPs.
- Primarily used AngularJS, NodeJs, Ruby on Rails and Ionic.
- Built MVP for several clients who went on to close large funding rounds and are still in business 8+ years later: [Myhippo](#), [Katalyst](#)

Technical Skills

Specialties: React, React Native, NodeJs, NextJs

Proficient: Pulumi, Terraform, PHP, Rails, Django, Python, SQL, AWS, GCP, Azure, All the JS tools (npm, yarn, typescript, jest), terminal skills, and many more of the billion things a modern developer needs to know ;).

Testimonials

Eric is a hard working engineer. He adapted to the company's style and workflow quickly, while mastering new frameworks and technologies. Eric is enthusiastic about projects, he remains focused and is able to prioritize. He continues to produce optimized, reusable code while learning whatever is needed to produce the best product. As a small company we all have to fill various roles and be able to work independently, Eric excels at this.

Whether it is coding new applications from the ground up, debugging and optimizing existing code, or coordinating with customer engineering teams, he succeeds at the task at hand.

Ed Parsons, CEO Acutulus Enterprises
